

CONCEPT 2

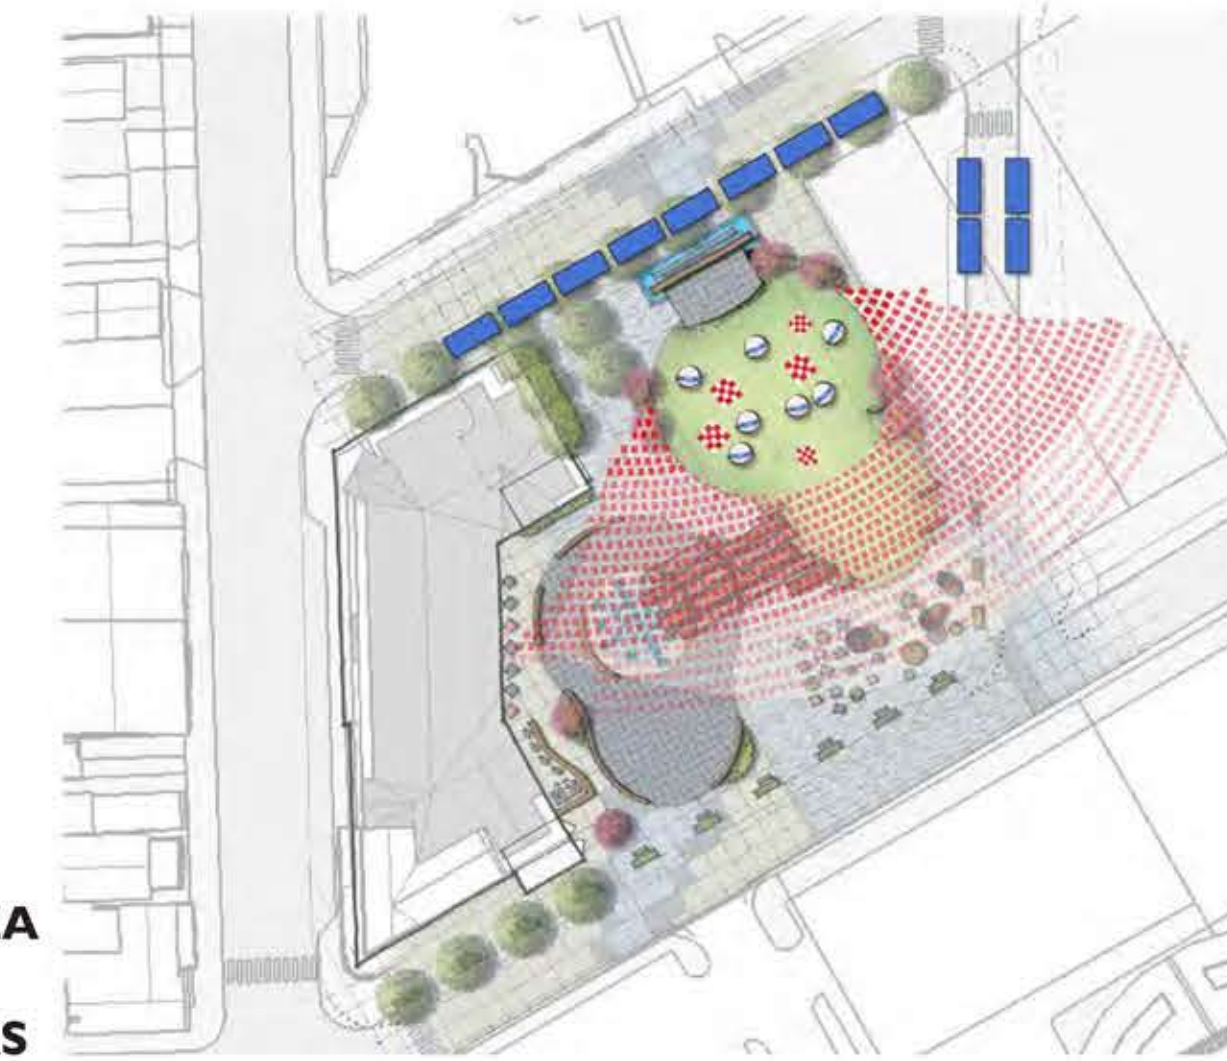

Concept 2 places the stage front and center, sitting it at the northern edge of an expansive lawn area. Seating opportunities are presented as large rectangular and rounded platform seat areas, spread throughout the site. Additional seat walls also provide opportunities for seating. The ice rink and designed in a "ribbon and pond" style, with a ribbon of ice along the northern half and a large pond area for more experienced skaters on the south. The splash pad is centrally-located within the ice rink, and provides a focal point for visitors entering the plaza from the pedestrian underpass. A large, rectilinear shade structure connects the ice rink / splash pad and lawn areas, and provides a place of cool respite in the summer. Finally, shade and ornamental trees are located strategically throughout the site to provide shade while also allowing for clear views into the stage area.
